

Project Overview

KarateByJesse.com QA Test Suite

Project Summary

karatebyjesse.com is the personal website of martial artist and YouTuber Jesse Enkamp, where he sells instructional videos, martial arts gear like gis, gloves, and belts, and posts links to his videos and blogs. His customers come here to buy from him, consume more of his content, and learn more about him and his journey.

This test suite simulates a full-scope QA audit, as if hired by Mr. Enkamp. The site was chosen out of personal interest in the subject, his unique circumstance of being very high profile in a less-than-well-known domain, and the website's suitability for manual QA testing. The aim of the project was to focus on user experience and flow, rather than just test if each feature worked as expected. Friction points like misleading or vague UI and accessibility issues were treated as high priority.

Objectives

- Follow and validate all user flows for function and ease
 - Identify any UX issues that could erode trust, especially on the sales or user sign-up path.
 - Validate basic accessibility standards
 - Record any instances of branding or navigation issues that could impact user experience or engagement
 - Validate all links, media, and calls to action are functioning and visually appealing
-

Scope

- **Fully tested:** Homepage, Blog, Contact, About, Sales pages, Footer, Navigation, CTAs
 - **Partially tested:** Purchase flow (tested up to but not including actually purchasing)
 - **Not tested:** Any back-end or user log-in areas
-

Methodology

Testing was conducted manually on:

- **Desktop:** Chrome (Windows 11 Home)
- **Mobile:** Chrome (iPhone 8 Plus)

Testing followed a hybrid approach:

- **Exploratory passes** - looking for the unexpected
- **Structured test cases** - following user flows and comparing to expected outcome
- **Accessibility review** - ensuring basic keyboard-only navigation and passable alt-text
- **Observational analysis** - UX-focused insight, beyond just pass/fail criteria

What's Inside

This suite includes:

- **80+ detailed test scenarios** across functional, UX, and accessibility
- **17 observations** rooted in UX, trust-building, and design consistency
- **4 confirmed bugs** with clear reproduction steps and real-world impact
- **7 user flows** crafted around real user intent - “Buy a Gi,” “Get training,” “Contact Jesse”

Example test cases from Sales flow:

	A	B	C	D	E	F
	Table3					
1	Id	Description	Priority	Steps	Expected Result	Notes
2	Sale_001	Validate mobile layout: content fits screen, no overflow, nav behaves correctly	High			
3	Sale_002	Validate clarity of offer communication (value, price, and delivery method)	High			Led to Obs_006, Obs_008
4	Sale_003	Validate promotional and marketing materials are functional, professional, and respectful	High	1. Navigate to each product or training page with embedded media. 2. Attempt to play each video. 3. Attempt to expand to fullscreen or navigate to video on host platform. 4. Test on both desktop and mobile view.	Embedded media plays correctly, offer fullscreen/host platform access, and be usable on desktop and mobile.	
5	Sale_004	Validate style and branding consistency across sales pages	Med			Led to Obs_009
6	Sale_005	Validate all links on sales pages are functioning and relevant	High			Led to Obs_007
7	Sale_006	Validate any samples or other downloads are functional and useable	High	1. Navigate to each relevant page that offers downloads or samples. 2. Click each download link. 3. Confirm the file begins downloading. 4. Open the file. 5. Confirm content is readable and matches expectations.	All sample or download links are functioning, trigger a download, and provide usable, expected content in a supported format.	
8	Sale_007	Validate clarity of the purchase or sign-up process	High			
9	Sale_008	Validate clear distinction between product types (e.g., books vs. courses)	Med			
10	Sale_009	Validate pricing is consistent across all mentions and views	Med			
11	Sale_010	Validate refund/return policy is visible and easy to understand	Med			

Core User Flows & Intent

This suite is structured around seven primary user flows, each one representing one of the main reasons a user may come to KarateByJesse.com . I designed the structured scenario testing around these flows, with the intent of keeping the user in mind and not filling the suite with less impactful tests.

1. Consume More Content from Jesse

Many users will arrive at Jesse's site because they are already fans and want to consume more of his content. My testing here focused on how easy it was for the users to find the content they wanted, and how consistent, clear, and respectful any calls to action were.

2. Buy a Gi

Jesse is known on youtube for owning a premium martial arts attire company and as such many users will be coming here looking for those products. While Jesse is well known in the community, users may be used to online shopping with bigger platforms and smaller sites like Jesse's need to ensure a high standard of credibility and clarity. Tests here were focused on accessibility, trust signals like consistent branding, quality and functioning of the site, and calls to action.

3. Explore Martial Arts for the First Time

Jesse is known as a wise and beginner-friendly teacher, and many users may be coming to his site to explore martial arts for the first time. These users need clear entry points and guidance. Testing in this area focused on accessible language, easy/intuitive navigation, and site structure.

4. Join a Martial Arts Community

Some users coming to Jesse's site are going to be more experienced martial artists looking to join a group of like minded people. Tests here focused on the presence and discoverability of community signals, and how easily the user could find information pertaining to their decision to connect with the group.

5. Get Training

Users will be coming to Jesse's site to purchase training videos, and will need to evaluate the content quality. Testing in this area focused on perceived legitimacy, including instructor tone and production quality, as well as overall UX process to acquire the materials.

6. Contact Jesse

Users looking to reach out require a fast, frictionless process that builds confidence. Testing focused on the accessibility and behavior of the contact form, error handling, and field validation and ensuring the user felt their message was/would-be received.

7. Learn About Jesse

Trust-building often begins with the “About” page. This flow was evaluated for content accuracy, ease of navigation to other areas and brand consistency. Internal links, layout structure, and the tone of biographical material were all tested to ensure a smooth experience.

Reflection & Lessons Learned

This project helped clarify the difference between how testing works and what its actual purpose is. Using the user flows to guide my test cases, and scoping the project by pretending it was a freelance gig gave me a lot of insight into how to actually test what needs testing. Throughout the completion of this project, I found the most impactful issues, barring things outright not working, were the broken trust signals like an out-of-date copyright or an inconsistent call-to-action.

I also sharpened my ability to scope large QA efforts. This was not a two hour project, but a weeks-long journey. I learned a lot about the project management process and the importance of strategy and perspective.
